This course discusses the fundamentals of Creo automation utilizing Pro/PROGRAM. It provides students to understand the philosophy and concepts of automating Creo assemblies and parts. The course teaches the essentials to understand types of building blocks that are available and to employ program construction principles. The student will understand how to use execute statements, feature relations, part relations, assembly relations, pattern relations, input statements, and the Pro/Layout functionality. They will also learn how to automate drawings using layer states and view states. The course will explain interchange groups and family tables in the Pro/PROGRAM environment.

**Creo Version:** All Creo Versions

**License Requirements:** Creo with Advanced Assembly license.

**Prerequisites:** Lessons and exercises assume that you have used Creo.

## Table of Contents

### Customizing CREO with Pro/PROGRAM

<b>Module 1: Introduction of Automation</b>	<b>1</b>
1.1 Course Introduction and Overview	2
1.2 What is Automation?	2
1.3 Benefits of Automation	2
1.4 Getting the Right Information	2
1.5 Collect and determine design specifications	3
1.6 Determine products input parameters	3
1.7 Determine products options	3
1.8 Determine parameter/options relations	4
1.9 Determine what is dynamic in the project	4
1.10 Skeleton Components	5
1.11 Determine components ownership	7
1.12 Determine using a Layout	7
<b>Module 2: Introduction of Layouts</b>	<b>9</b>
2.1 Creating a Layout	10
2.2 Creating Layout Relations	12
<b>Module 3: Pro/PROGRAM and Relations</b>	<b>16</b>
3.1 Overview of Pro/PROGRAM	17
3.2 Pro/PROGRAM Fundamentals	17
3.3 Editing Pro/PROGRAM	18
3.4 Relations	20
3.5 Assembling Dynamic assemblies with skeletons	22
3.6 Defining the skeleton	22
3.7 Defining the Bed Rails	23
3.8 Defining the Floor	24
<b>Module 4: Replacing Components</b>	<b>25</b>
4.1 Introduction Replacing Components	26
4.2 Interchange Groups or Assemblies	26
4.3 Create Interchange Assemblies	27
4.4 Replacing Components Programmatically	32
4.5 Suppressing Components Programmatically	35
4.6 Input and Execute Statements	36

<b>4.7 Using the Component ID in Assembly Relations</b>	<b>37</b>
<b>4.8 What is an Evaluate Features?</b>	<b>40</b>
<b>4.9 Creating Evaluate Features</b>	<b>40</b>
<b>4.10 Understanding Post Relations</b>	<b>41</b>
<b>4.11 Adding Evaluation Features to Post Relations</b>	<b>43</b>
<b>Module 5: Drawing Programs</b>	<b>44</b>
<b>5.1 Introduction of Drawing Programs</b>	<b>45</b>
<b>5.2 Drawing States</b>	<b>45</b>
<b>5.3 Drawing Programs</b>	<b>45</b>
<b>5.4 Creating a Drawing State</b>	<b>46</b>
<b>5.5 Creating a Drawing Program</b>	<b>48</b>
<b>5.6 Creating a Relation in Drawing Program</b>	<b>50</b>
<b>5.7 Creating Drawing Layers</b>	<b>51</b>
<b>5.8 Controlling Drawing Layer Using View States</b>	<b>54</b>
<b>5.9 Creating Layer States</b>	<b>55</b>
<b>5.10 Adding Layer States to Relation</b>
