Windchill customizations have always been deployed the hard way — manual xconf edits, file copies, action model surgery, and hope. **Windchill App Manager changes that entirely.** It gives every Windchill site a governed, audited, cluster-aware install engine that deploys, validates, updates, and uninstalls third-party extensions with the same reliability you expect from enterprise software — and the rollback safety you've never had.

THE PROBLEM WE SOLVE

BEFORE WINDCHILL APPS MANAGER

- Manual, fragmented deployments with no standard, ownership or lifecycle
- No audit trail, DevOps automation, or cluster-friendly deployment process
- Uninstalls are slow, complex, and high-risk

WITH WINDCHILL APPS MANAGER

- Versioned, installable applications with a standardized deployment model
- Built-in install, update, rollback, uninstall, and audit tracking
- DevOps-ready: Repeatable, automated, environment-agnostic deployments with safe cleanup

PLATFORM CAPABILITIES

DevOps-Ready Deployments

Package once and promote across DEV, QA, and PROD with consistency. Eliminates manual scripts and enables repeatable, auditable deployments for Windchill customizations.

Cluster-Aware

Distributes packages, runs parallel validation, and executes synchronously across every cluster node using Windchill's inbuilt capabilities.

Signed Packages

RSA-signed manifests with SHA-256 checksums. JAR-level trust chain prevents tampered packages from ever executing.

Full Uninstall

Reverses every phase in order — xconf, codebase, actions, preferences — and cleans the registry across all layers.

Audit & Logging

Per-node timestamped install (& app) logs with phase-level change records. Every file deployed, every action injected, fully traced.

Built-in Docs & Logs Viewer

Apps ship Markdown, HTML, and PDF docs that render inside WAM. Admins never leave Windchill to read the manual.

Windchill Apps Manager is developed and maintained by Felco Solutions Inc.
Available in Standard and Enterprise editions · CLI installer included · Full REST API
